**Neenah Enterprises, Inc. Makes \$2.5 Million Equipment
Investment at Neenah Foundry**

Investment increases ductile production by more than 20 percent

NEENAH, WIS. (July 30, 2015) – Neenah Enterprises, Inc. (NEI) recently invested \$2.5 million at the Neenah Foundry located in Neenah, Wis. The investment allows for increased production of ductile iron from 35 tons per hour to 42 tons per hour – a 20 percent increase. NEI operates multiple facilities across the U.S., each offering unique capabilities and areas of expertise.

“As the industry evolves, our clients are beginning to increase the demand for ductile iron,” said Tom Riordan, CEO of Neenah Enterprises, Inc. “NEI is committed to serving the needs of our clients the best we can, which is why we needed to increase our ductile production, and was the driving force in this investment.”

Demand for ductile iron is growing in many industries. While similar to gray iron, ductile iron boasts more strength, flexibility and impact resistance.

The project was completed in two phases – the first was finished in winter 2014, which was building and installing the infrastructure to support new equipment, and the second phase saw the installation of equipment to expand ductile production.

The Neenah Foundry specializes in gray and ductile iron for heavy truck, agriculture and construction manufacturers and suppliers. It is NEI’s largest facility, and is able to mold gray and ductile iron both vertically and horizontally on its five mold lines, as well as produce a wide range of castings. With Neenah’s state-of-the-art KW Line, which can produce castings up to 2,000 pounds, NEI is prepared to tackle the largest projects well into the future.

About Neenah Enterprises, Inc.

Drawing on more than 140 years of manufacturing experience, Neenah Enterprises, Inc., (NEI), headquartered in Neenah, Wis., is a leader in producing durable castings for industrial sectors across the globe and is a key component provider for many of the world’s top manufacturing companies. NEI specializes in gray and ductile iron castings and forged steel products serving customers through its seven North American facilities. Auxiliary services include machining, painting and heat treatment. With thousands of employees working in a range of diverse fields, NEI’s Industrial division is a trusted design and engineering partner to the world’s leading manufacturing companies.
